

Investor Letter

No. 2

BABYLON CAPITAL
& BÖRSTJÄNARFOLKET

REPORTING PERIOD: SEPTEMBER 2026

Published October 2026

Uppsala on 17 November

On 17 November we will hold our first in-person investor meeting in Uppsala. We would be delighted to meet those of you who have invested in Babylon Capital - you are very welcome. We look forward to meeting shareholders and having time for your questions. The meeting is also open to prospective investors, so feel free to bring friends and acquaintances.

During the evening we will talk about the work in the company and how the capital will be managed. We will review our focus on Managed Futures and trend-following strategies in global financial markets, and how these can complement a portfolio of equities and bonds.

DATE

Tuesday

17 November 2026

Babylon Capital: banking arrangements completed

For Babylon Capital, September was largely about forms, documentation and contact with banks. The banks' paperwork is now finally complete, and Nordea has approved Fredrik Swahn as the company's representative in his role as CEO.

This meant that during September we were able to convert capital into US dollars. At today's exchange rate, the conversion has been favourable and has produced a small positive currency effect. However, this is minor compared with the changes in value that may arise once trading in Arkad begins. The exchange rate can also move in the opposite direction.

We are now only waiting for one final approval from StoneX before the capital can be transferred to an account there. Trading in Arkad can then begin. At the same time, the team is completing the share register.

Börstjänarfolket: up 20.9 percent in September

IN SEPTEMBER

20.9%

Share price increase during the month

PER SHARE

SEK 8.49

Value after September

DRIVER

Bittensor

Holding that drove the result

September was a strong month for Börstjänarfolket. The share price rose by 20.9 percent and the value now amounts to SEK 8.49 per share. The holding in Bittensor once again accounted for the increase.

Bittensor is a decentralised network for artificial-intelligence services. The network contains different subnets in which participants contribute, for example, AI models and computing power and are rewarded with the crypto asset TAO. The idea is to create an open market in which useful contributions receive economic compensation.

TAO is a volatile asset with significant potential.

Education: How Managed Futures work

Ahead of the start of trading, we want to explain how the futures market works and how the capital is handled. It is easy to confuse who holds the capital, who makes the trading decisions and who safeguards the funds. These are three different roles.

Futures - exposure without buying the entire asset

A futures contract is a standardised agreement with specified terms for a future transaction. Futures exchanges trade contracts linked to, among other things, equity indices, interest rates, currencies and commodities. By buying or selling contracts, a manager can take positions for both rising and falling markets.

To open a position, collateral - known as margin - is posted instead of paying the full value of the contract. The margin is intended to ensure that the parties can meet their obligations. If the contract is held to expiry, physical delivery or cash settlement takes place, depending on the terms of the contract.

It may sound like an option, but the difference is significant. The futures market is a marketplace where producers and consumers can hedge future prices and thereby reduce their market risk. Speculators assume risk in the hope of making a profit and at the same time contribute liquidity, making it easier for others to buy and sell.

Who owns, manages and holds the capital?

As a shareholder, you own shares in Babylon Capital. The company holds the capital and is the account holder. Hallenborg CTA is responsible for the strategy and trading decisions under the management mandate, but does not hold the company's money.

GFF Brokers acts as the brokerage contact. StoneX Financial acts as the Futures Commission Merchant, or FCM. An FCM handles, among other things, customer accounts, margin and the execution of futures trading. The contracts are traded on futures exchanges and cleared through clearing houses, which handle settlement between market participants.

Segregated customer funds

Segregation means that customer funds are kept separate from the FCM's own money. For trading on US futures exchanges, specific rules are designed to prevent customer funds from being used for the firm's own operating expenses.

StoneX Financial Inc. is registered with the US regulator CFTC and is a member of the industry's self-regulatory organisation, the NFA. The regulatory framework covers, among other things, customer funds, reporting and capital requirements.

Spain and England

In addition to the meeting in Uppsala, Henrik will meet new and existing clients in Torrevieja on 26-29 October, on the Costa del Sol from 30 October to 2 November, and in London on 9-12 November.

Please get in touch if you would like to book a time for a personal presentation.

Watch the recording of the investor meeting

Did you miss our latest investor meeting? In the recording, we review the latest developments in Babylon Capital and Börstjänarfolket. The educational section covers the participants in the futures market and their different roles, which we briefly discussed above - from producers and speculators to brokers, managers and clearing houses.

The website is live

Babylon Capital's website is now live: www.babyloncapital.se.

We will regularly publish the company's net asset value per share and a chart showing its development. You can also register for our investor meetings and read about the company's core philosophy. Please feel free to share the link with friends and acquaintances.

Kind regards,

Henrik Hallenborg and Fredrik Swahn
