

Investor Letter

No. 2

**BABYLON CAPITAL
& BÖRSTJÄNARFOLKET**

REPORTING PERIOD: SEPTEMBER 2026
Published October 2026

Uppsala on 17 November

On 17 November, we will hold our first in-person investor meeting in Uppsala. We would love to meet you as an investor in Babylon Capital — you are warmly welcome! We look forward to meeting our shareholders and answering your questions. The meeting is also open to new investors, so please invite friends and acquaintances.

During the evening, we will discuss our work in the company and how the capital will be managed. We will explain our focus on Managed Futures and trend-following strategies in global financial markets, and how they can complement a portfolio of equities and bonds.

DATE	Tuesday 17 November 2026
TIME	17.30
VENUE	Rosendals Multihus — Auditorium, Uppsala

Places are limited — register here to reserve your place.

Babylon Capital: bank paperwork completed

For Babylon Capital, September largely involved forms, documentation and discussions with banks. The bank paperwork is finally complete, and Nordea has approved Fredrik Swahn as the company's representative in his role as CEO.

This allowed us to exchange capital into US dollars during September. At today's exchange rate, this has proved favourable, producing a small positive currency effect when the dollar holdings are valued in Swedish kronor. However, this is small relative to the changes in value that may occur once trading in Arkad begins. Exchange rates can also move in the opposite direction.

We are only awaiting final approval from StoneX to transfer the capital to an account there. Trading in Arkad can then begin. Meanwhile, Kaptena is working to finalise the share register.

Börstjänarfolket: up 20.9% in September

20.9%	SEK 8.49	Bittensor
in September		driver of the gain

September was a strong month for Börstjänarfolket. The share price rose 20.9% and now stands at SEK 8.49 per share. Once again, the holding in Bittensor drove the gain.

Bittensor is a decentralised network for artificial intelligence services. Its subnets allow participants to contribute, for example, AI models and computing power, earning the crypto asset TAO as a reward. The aim is to create an open market where useful contributions receive financial compensation. TAO is a volatile asset with considerable potential.

Education: how Managed Futures work

Before trading begins, we want to explain how the futures market works and how the capital is handled. It is easy to confuse who owns the money, who makes trading decisions and who holds it. These are three distinct roles.

Futures — exposure without buying the entire asset

A futures contract is a standardised agreement with specified terms for a future transaction. Futures exchanges trade contracts linked to equity indices, interest rates, currencies and commodities, among others. By buying or selling contracts, a manager can take positions for both rising and falling markets.

To open a position, collateral known as margin is posted instead of paying the contract's full value. Margin helps ensure that the parties can fulfil their obligations. If a contract is held to expiry, physical delivery or cash settlement takes place, depending on its terms.

This may sound like an option, but the difference is substantial. The futures market brings together producers and consumers who can hedge future prices and reduce market risk. Speculators take on risk in the hope of earning a profit, while providing liquidity that makes it easier for others to buy and sell.

Who owns, manages and holds the capital?

As a shareholder, you own shares in Babylon Capital. The company owns the capital and is the account holder. Hallenborg CTA is responsible for the strategy and trading decisions under its management mandate, but does not hold the company's money.

GFF Brokers acts as the brokerage contact and service provider. StoneX Financial acts as the Futures Commission Merchant, or FCM. An FCM handles client accounts, collateral and settlement of futures trading, among other functions. Contracts trade on futures exchanges and are cleared through clearing houses, which manage settlement between market participants.

Segregated client funds

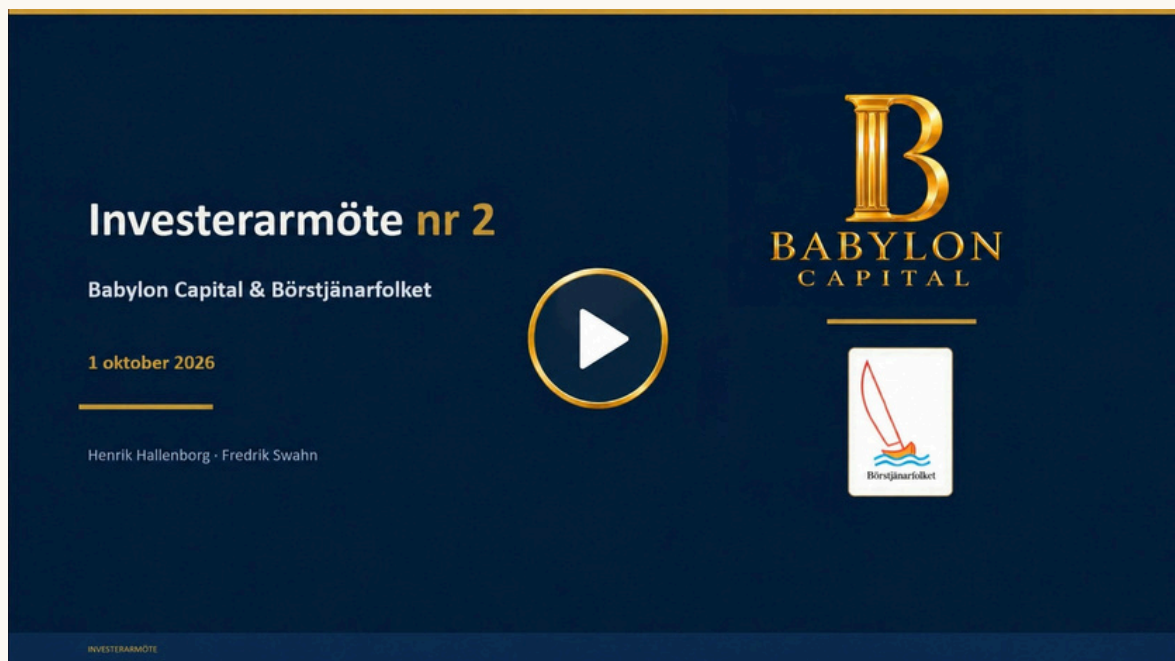

Segregation means that client funds are kept separate from the FCM's own money. Specific rules for trading on US futures exchanges are designed to prevent client funds from being used for the firm's own operating expenses.

StoneX Financial Inc. is registered with the US regulator CFTC and is a member of the industry's self-regulatory organisation, NFA. The rules cover client funds, reporting and capital requirements, among other areas.

Spain and England

In addition to Uppsala, Henrik will meet new and existing clients in Torrevieja on 26–29 October, on the Costa del Sol from 30 October to 2 November, and in London on 9–12 November.

Please get in touch to arrange a personal meeting.

Watch the investor meeting recording

Did you miss our latest investor meeting, or would you like to watch it again? The recording covers the latest news from Babylon Capital and Börstjänarfolket. The educational section looks at futures market participants and the roles briefly discussed above — from producers and speculators to brokers, managers and clearing houses.
